DETAILED ACTION

Information Disclosure Statement

1. The references listed in the Information Disclosure Statement submitted on January 28, 2004, April 26, 2004 and May 12, 2005 have been considered by the examiner (see attached PTO-1449).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-5, 11-16, 20-25, 27-31, and 33-40 rejected under 35 U.S.C. 102(e) as being anticipated by Bjarnason (United States Patent 6,795,547).

Regarding **claim 1** Bjarnason discloses a full duplex speakerphone providing increased loop stability. In addition, Bjarnason discloses a level adjusting device for use with a near-end telephone, the near-end telephone being operable to generate an outgoing signal directed to a far-end telephone and to receive an incoming signal generated at least in part by the far-end telephone, the device comprising: a first signal processor operable to dynamically adjust a first signal level associated with the outgoing signal with reference to the first signal level; and a second signal processor operable to dynamically adjust a second signal level associated with the incoming signal with

Art Unit: 2644

reference to the second signal level; wherein the first and second signal processors are further operable to control a loop gain to inhibit loop instability, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Page 3

Regarding **claim 2**, Bjarnason discloses everything claimed as applied above (see claim 1), in addition Bjarnason discloses wherein the first and second signal processors are operable to dynamically adjust the first and second signal levels in a plurality of bands, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding **claim 3**, Bjarnson discloses everything claimed as applied above (see claim 2) in addition Bjarnson inherently discloses plurality of bands comprises one of 2, 3, 4, and 5 bands, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding **claim 4**, Bjarnson discloses everything claimed as applied above (see claim 2) in addition Bjarnson inherently discloses wherein the plurality of bands are selected such that a range of frequencies associated with DTMF signaling is entirely encompassed within a single band, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding **claim 5**, Bjarnson discloses everything claimed as applied above (see claim 1), in addition Bjarnson discloses wherein the each of the first and second signal processors comprises a static gain control component (e.g. detection mode) and a dynamic gain control component, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Art Unit: 2644

Regarding **claim 11**, Bjarnson discloses everything claimed as applied above (see claim 5), in addition Bjarnson discloses wherein the incoming and outgoing signals comprise analog signals, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding **claim 12**, Bjarnson discloses everything claimed as applied above (see claim 11), in addition, Bjarnson discloses wherein the analog signals conform to one of a US or international standard specification for connecting a telephone set to a telephone network as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding **claim 13**, Bjarnson discloses everything claimed as applied above (see claim 11), in addition, Bjarnson discloses circuitry for separating and combining the incoming and outgoing signals for processing by the first and second signal processors, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding **claim 14**, Bjarnson discloses everything claimed as applied above (see claim 13), in addition, Bjarnson discloses wherein the circuitry comprises first and second hybrids, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding **claim 15**, Bjarnson discloses everything claimed as applied above (see claim 1), in addition, Bjarnson discloses wherein the incoming and outgoing signals comprise digital signals, as disclosed at column 7, line 50 through column 9, line 22 and exhibited in figure 4.

Regarding **claim 16**, Bjarnson discloses everything claimed as applied above (see claim 15), in addition, Bjarnson inherently discloses wherein the digital signals conform to one of a plurality of specification for connecting a digital telephone set to a digital telephone network, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding **claim 20**, Bjarnson discloses everything claimed as applied above (see claim 1), in addition, Bjarnson discloses a near-end echo canceller operable to reduce echo in the outgoing signal, and a far-end echo canceller operable to reduce echo in the incoming signal, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding **claim 21**, Bjarnson discloses everything claimed as applied above (see claim 20), in addition, Bjarnson a near-end speech detector for detecting near-end speech and controlling the near-end echo canceller in response thereto, and a far-end speech detector for detecting far-end speech and controlling the far-end echo canceller in response thereto, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding **claim 22**, Bjarnson discloses everything claimed as applied above (see claim 1), in addition, Bjarnson discloses wherein the first and second signal processors are operable to control the loop gain by decreasing at least one of a first gain associated with the first signal processor and a second gain associated with the second signal processor with reference to a combined gain which represents at least a

Art Unit: 2644

portion of the loop gain, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding claim 23, Bjarnson discloses everything claimed as applied above (see claim 22), in addition, Bjarnson discloses wherein the first and second signal processors are operable to control the loop gain by decreasing the first gain when the outgoing signal does not correspond to outgoing speech energy, and decreasing the second gain when the incoming signal does not correspond to incoming speech energy, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding **claim 24**, Bjarnson discloses everything claimed as applied above (see claim 13), in addition, Bjarnson discloses wherein each of the first and second gains comprises a plurality of gain components each of which contributes to the combined gain, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding **claim 25**, Bjarnson discloses everything claimed as applied above (see claim 24), in addition, Bjarnson discloses wherein the first and second signal processors are operable to control the loop gain by decreasing only selected ones of the plurality of gain components, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding **claim 27**, Bjarnson discloses everything claimed as applied above (see claim 24), in addition, Bjarnson discloses where the first and second signal processors are further operable to inhibit increases in selected ones of the gain

components in the absence of speech energy, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Page 7

Regarding claim 28, Bjarnson discloses everything claimed as applied above (see claim 22), in addition, Bjarnson discloses wherein the combined gain includes a loss component determined with reference to the incoming and outgoing signals, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding claim 29, Bjarnson discloses everything claimed as applied above (see claim 28), in addition, Bjarnson discloses wherein the loss component comprises an estimate of an echo return loss, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding claim 30, Bjarnson discloses everything claimed as applied above (see claim 29), in addition, Bjarnson discloses wherein the estimate is determined with reference to a difference signal representative of a difference between a return energy signal corresponding to the incoming signal and an outgoing energy signal corresponding to the outgoing signal, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding claim 31, Bjarnson discloses everything claimed as applied above (see claim 30), in addition, Bjarnson discloses wherein the estimate deemphasizes speech energy in the incoming signal, as disclosed at column 5, line 27 through column 7, line 49 and exhibited in figures 2 and 3.

Regarding **claims 33-40** they are interpreted and thus rejected for the reasons set forth above in the rejection of claims 1-5, 11-16, 20-25, 27-31.

Claim Rejections - 35 USC § 103

3. Claims 17-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bjarnson in view of well known prior art.

Regarding **claim 17**, Bjarnson discloses everything claimed as applied above (see claim 1), however, Bjarnson fails to disclose bypass circuitry operable to bypass the first and second signal processors, however, the examiner maintains that is was well known in the art to provide bypass circuitry operable to bypass the first and second signal processors. Further, there can be no invention in mererly providing means to selectively alternate between one unpatentable configuration of elements and another unpatentable configuration of old elements, where there is no new or different function. See The Duplan Corporation v. Deering Milliken, Inc., et al., 197 USPQ 342 (DC SC 197).

Regarding **claims 18 and 19** they are interpreted and thus rejected for the reasons set forth above in the rejection of claim 17.

Allowable Subject Matter

4. Claims 6-10 and 26 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Application/Control Number: 10/696,239 Page 9

Art Unit: 2644

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jefferey F. Harold whose telephone number is 571-272-7519. The examiner can normally be reached on Monday - Friday 9 am - 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sinh H. Tran can be reached on 571-272-7564. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
